

CryptoChart™

Dear Staff,

You may have noticed we have begun receiving an alternative to patient CDs. This alternative will allow you to view images on any computer or mobile device by simply scanning a QR code or typing in a secure web access code.

What does it look like?

When accessing studies this way, your experience will be simple. You will see a menu from which you may select one of several options (pictured below). From there, you will have complete access to the patient images.

Please **click here** to view a short video on How to use CryptoChart.

What does this mean for us?

The world is changing. Exams are getting larger, services are moving to the cloud for instant access from anywhere, and healthcare requirements are changing to provide better patient care. This new alternative, CryptoChart, helps you save time and meet those needs.

This means no more dealing with damaged CDs or dealing with properly disposing of patient CDs. You can even download the images to store in your own imaging system if you desire.

No PHI is downloaded to any device when using CryptoChart unless you download the DICOM images for import to your PACS.

What to do if you need help
